SOMASEKHAR V

Senior QA Automation Engineer | SDET | AI-Orchestrated Product Builder

Bengaluru, India somasekhar.r@outlook.com +91 90089 79099 LinkedIn GitHub

PROFESSIONAL SUMMARY

Senior QA Automation Engineer and SDET with 9+ years of experience across Java, Selenium WebDriver, QMetry/QAF, Rest Assured, TestNG, Cucumber BDD, Postman/Newman, API validation, DMS workflows, desktop automation, CI/CD, Agile delivery, and enterprise low-code platform testing. Built QMetry and Rest Assured/TestNG frameworks from scratch for ECAP platform validation. Recently expanded into AI-assisted product orchestration, using modern AI tools to plan, generate, refine, and validate working web products while applying senior QA judgment to usability, correctness, maintainability, and release readiness.

TECHNICAL SKILLS

Automation: Selenium WebDriver, QMetry/QAF, TestNG, Cucumber BDD, POM, hybrid frameworks.

API Testing: Rest Assured, TestNG, Postman, Newman, JSON/XML, schema validation, API collections, DMS validation.

Languages: Java, JavaScript, Python basics, SQL/MySQL, HTML, CSS.

Delivery: Jenkins, Maven, Git/GitHub, Jira, QMetry, Agile/Scrum, Docker basics.

Testing: Functional, regression, smoke, sanity, desktop, data validation, low-code workflows.

AI/Product: Prompt engineering, AI-assisted coding, workflow decomposition, product QA, UI/UX review.

EXPERIENCE

Oct 2022 - Present

Senior QA Automation Engineer - Escriba IG Tech

- Validate enterprise low-code/no-code platform capabilities covering business rules, process modeling, role-based access, DMS workflows, and configurable application behavior.
- Built a QMetry/QAF Selenium framework from scratch with Maven, Cucumber/TestNG suites, JSON-driven data, reusable step definitions, screenshot/reporting setup, and Jenkins-ready execution.
- Built Rest Assured + TestNG API automation frameworks with reusable base classes, response verifiers, URL utilities, data providers, externalized JSON payloads, schema validation, and report generation.
- Design and execute automation strategies using Java, Selenium, QMetry/QAF, Rest Assured, TestNG, Postman/Newman, and CI-friendly validation patterns.
- Strengthen API and document workflow confidence through reusable collections, data-driven checks, and structured reporting.

- Use AI-assisted engineering to accelerate product prototyping, test thinking, documentation, and implementation review.

Aug 2018 - Oct 2022

QA Automation Engineer - Cerner Healthcare

- Automated and validated healthcare application workflows using desktop and backend testing approaches.
- Supported regression, API, database, and release validation for critical clinical workflows.
- Collaborated with cross-functional teams to investigate defects, clarify requirements, and improve test coverage.

Jan 2017 - Aug 2018

QA Engineer - Clonect Solutions

- Performed functional, regression, and performance-oriented validation for GST application workflows.
- Built Selenium/TestNG automation coverage for repeatable business-critical scenarios.

SELECTED PROJECTS

ECAP QMetry Automation Framework: Framework built from scratch for enterprise UI regression using Java, Selenium, QMetry/QAF, Maven, Cucumber/TestNG, JSON test data, reusable step definitions, reporting, and Jenkins execution.

Rest Assured TestNG Framework: API automation framework for ECAP and DMS services covering login, folders, files, permissions, users, teams, objects, document types, document tags, schema validation, Allure/Extent/HTML reporting, JaCoCo, SonarQube, retry/listener utilities, and CI/CD dashboards.

Code Generation Studio: AI-assisted platform for generating API test assets, scripts, and workflow outputs with QA review built into the delivery process.

Newman DMS Automation: Postman/Newman automation for enterprise document upload and API validation flows.

Hablen CRM: AI-orchestrated CRM product focused on lead, account, and operational workflows.

hablen-newsite: Modern business website refresh with responsive layout, clearer messaging, and improved user presentation.

Job Intelligence Platform: Career-tech product concept for job-fit analysis, role discovery, and application tracking.

TestFileGen PRO: AI-developed client-side QA utility for generating and validating images, documents, data, and web files; supports file-size boundaries up to 2GB, corrupted payloads, MIME mismatches, security strings, encrypted ZIPs, CSV/JSON schema scaffolding, and magic-byte validation.

Expense Tracker, Interactive Counter: Utility and frontend products demonstrating structured workflows, state management, and usable UI execution.
